

The AI platform for your business

Provide your organization with secure and regulated access to the most powerful language models. All in a single application.

VARIOS AI

WHAT CAN VARIOS AI DO?

Anything is possible

VARIOS AI is a platform through which any local and public AI can be utilized – such as ChatGPT, Azure OpenAI Services, or DeepSeek. Use it to find the optimal AI for any application: whether it's text or code creation, online research, or creative work.

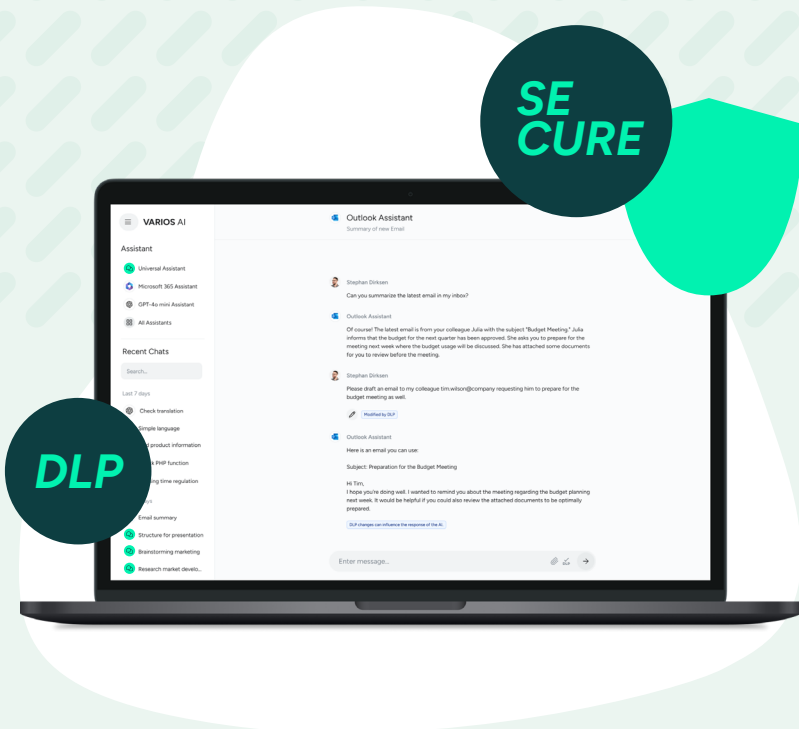

MODULAR

AI models and data sources

In VARIOS AI, you can connect AI models with your individual data sources, significantly enhancing the quality of responses.

This modular structure offers maximum flexibility for your teams. Each team gains access to optimal AI tools and specially trained assistants. Integrate your product databases, CRM, or Microsoft 365 with models from OpenAI, Anthropic, or Mistral AI – in the cloud, locally, or hybrid.

SECURE

Maximum AI power, minimal risk

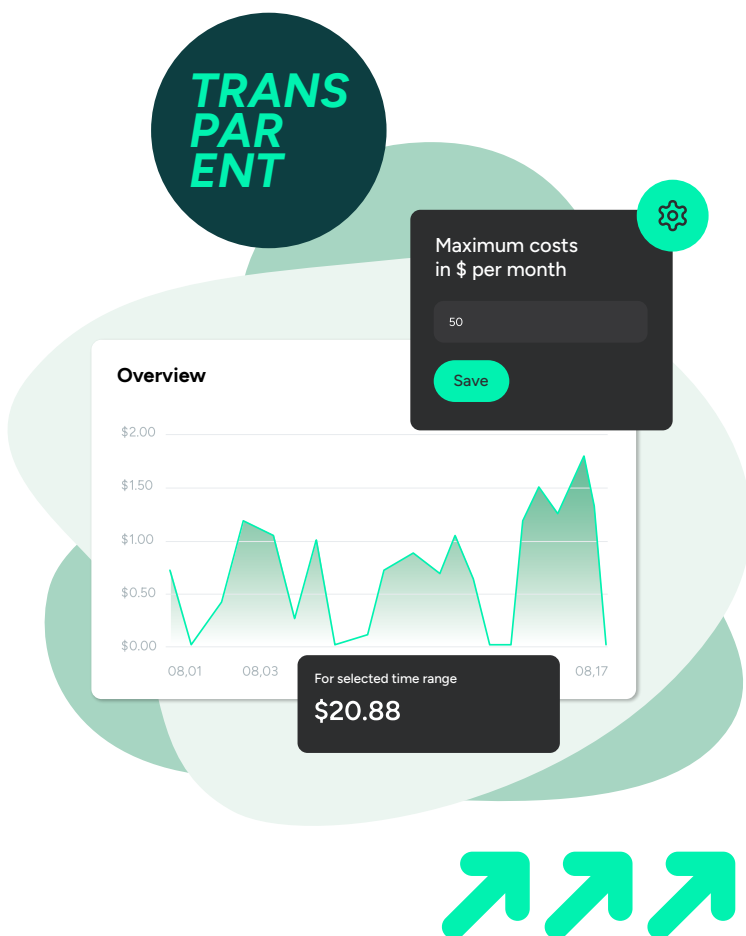

Personal data must not be exposed to public language models. VARIOS AI protects you from this with DLP (Data Loss Prevention). It detects and prevents the leakage of sensitive data. Additionally, it secures all data and chats exchanged.

The use of different models offers high availability and maximum agility. A comprehensive user and group management system provides you with regulatory options for organizations.

TRANSPARENT

Complete control with the dashboard

A large organization requires several AI models that are optimally suited for individual users. The dashboard allows real-time monitoring of interactions and costs for groups and users, all the while maintaining privacy without accessing the chats.
